

WORTHINGTON
INDUSTRIES

Oil & Gas Equipment

About Us

The Worthington Industries story began with an opportunity for custom processed steel. Since then, Worthington has expanded its reach to become a leading manufacturer of metal products, including surface level well head equipment for the oil and gas industry.

At Worthington, we work hard from consultation to installation to be the leading experts in oil and gas production and process solutions and have strategically located our facilities in or near major shale plays for easy accessibility to our customers.

Our core competency of tank manufacturing for highly technical and regulated markets supports the nationwide manufacture of storage, process and transport equipment for the oil and gas industry. Our products are built to the highest safety and quality standards, and built to last.

Our Products

At Worthington Industries, we take great pride in manufacturing quality products that meet the strict, highly regulated standards of the oil and gas industry. Our additional design engineering and custom fabrication capabilities strengthen our commitment and ability to partner with our customers even more for maximum results.

Storage Solutions

Steel Tanks

Manufactured with state-of-the-art welding systems, our 5 – 1,000 bbl steel tanks meet UL, STI and API 12F standards for the storage of crude petroleum and other production liquids.

Fiberglass Tanks

Utilizing a modern, automated filament winding process in accordance with API 12P standards, Worthington Industries fiberglass tanks offer four layers of protection against corrosion and UV rays for proven durability and come in the following options:

- Vertical Flat Bottom
- Vertical Leg
- Horizontal

Frac Tanks

Our vertical and horizontal frac tanks store water used in the down hole fracturing process to extract oil or gas from shale or other permeable formations. We manufacture skidded frac tanks in 100, 200, 250 and 300 bbl sizes.

Stairways and Walkways

In addition to steel and fiberglass tanks, we supply stairways, walkways and platforms manufactured to OSHA requirements as needed.

Field Installation

At Worthington Industries, we maintain a company-owned fleet of trucks with hydraulic booms and mobile cranes. Our turnkey installation, startup, commissioning and operation services maximize spud-to-spud efficiency by ensuring rapid delivery and proficient on-site tank set up.

Separation Equipment

Gas Production Units

Our custom two and three-phase separation units have the ability to flow up to 12 MMCF per day and range from 500 – 1440 MAWP.

Separators and Sand Traps

Since 1909, our gas and oil separators have proven themselves in service. Available in a range of custom sizes and configurations, they offer cost-effective solutions for greater well production.

Gun Barrels

Used for atmospheric oil and water separation, gun barrels are ideal for working conditions where no heat is required for separation.

Vertical and Horizontal Heater Treaters

Manufactured to ASME requirements, our vertical and horizontal heater treaters are used for gas, water and oil separation when low pressure and high fluid volume are required.

Additional Well Head Equipment

We consult with our customers to help identify the most appropriate processing and treatment solutions for regional conditions. Additional equipment capabilities include, but are not limited to:

- Drips and Fluid Shutoffs
- Scrubbers
- Free Water Knockouts
- Line Heaters
- Desiccant Dryers

Automation and Measurement

Worthington Industries offers a full range of customized well pad measurement & automation solutions to help you quickly and safely deploy, operate and optimize your field production. Whether you're looking for tank level measurement, GPU automation or total system integration at the plant or on location, Worthington provides custom-engineered applications to serve the entire production process.

Certifications & Standards

Worthington is well known for its unrelenting commitment to quality and safety. Manufacturing techniques adhere to the strictest codes set forth by various governing bodies.

Worthington is joined by the integrity and heritage of Westerman Companies, Palmer Mfg. & Tank and Midstream Equipment Fabrication. Some certifications and licenses may be currently held under these respective names.
